

Delivering the future of connectivity

The Government have put connectivity improvement at the centre stage of its agenda with an admirable ambition to make the UK a world leader in digital infrastructure. Their target is to deliver gigabit broadband by 2025

Currently just 8% of the UK population have full fibre connections

We continue to grow our team and our department to deliver the future of Telecoms with the roll-out of fibre in line with Government targets and to support the long term growth of the sector

In the last 12 months we have:

Dalcour Maclaren identified fibre connectivity as a key part of progression within the utilities sector early on, and established a team of dedicated surveyors in 2018

4,120 grantors consulted with and legal agreements issued

2,629 consents agreed and resolved

147km of cable route consented

Our Telecoms Team has been the fastest growing Sector in the history of Dalcour Maclaren which demonstrates the direction of travel for the 'fourth utility sector'. Our team of experts are dedicated to supporting Government goals for roll-out of fibre connectivity to the masses.
