

DM's focus on the future of renewables

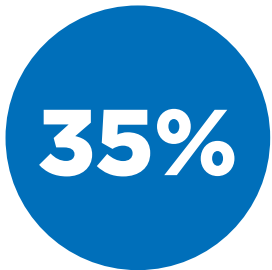

Dalcour Maclaren's dedicated renewables team are fully equipped to support a carbon neutral economy by 2050

May 2020 was the first month that the UK has gone coal-free for a whole month. We are working with clients towards delivering more coal-free methods of generating electricity

Solar power provides an increasing percentage of the UK's energy transmission; we have worked hard on getting the industry to this point and will continue to do so

In February, during the stormy weather, offshore wind provided 35% of the total energy produced, and it continues to provide around 20%

15GW of renewable energy

DM is supporting renewable energy projects with a combined capability of generating 15GW of renewable energy

£35m

The UK has seen an investment of £35million in the sector so far

1700

We have advised on renewable projects which will ultimately see the installation of over 1700 offshore wind turbines

11 million

That is enough to supply around 11 million homes

Our team of experts continue to support energy companies throughout a significant period of change within the sector. Drawing on a wealth of experience, and through the use of tried and tested approaches to land and environmental matters, we have established a reputation for getting the job done.
